## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1 and 2, drawn to methods for detecting a tumor comprising applying a polynucleotide probe to a sample, classified in class 435, subclass 6.
  - II. Claims 3 and 4, drawn to methods for regulating a tumor or an adverse bodily reaction, classified in class 514, subclass 2.
  - III. Claim 5, drawn to methods for detecting a tumor comprising applying an antibody to a sample, classified in class 435, subclass 7.1.

2. The inventions are distinct, each from the other, for the following reasons:

Inventions I, II and III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, the different inventions are drawn to three distinct methods because the methods of group I are in vitro methods comprising the use of polynucleotide products, the methods of group II are in vivo methods of treatment and the methods of group III are in vitro methods comprising the use of polypeptide products. Further, it would place an undue burden on the examiner to examine several, independent inventions in one application.

Art Unit: 1642

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
